GOD TRADES

reversal green candle is bi
previous red, HUGE b

✦ Introduction

Premise

Price is constantly seeking a good deal, and will thoroughly examine every price to find it. But occasionally the algos will send market rushing in a direction, thus prices are skipped.

To fix this, price will return to these "gaps". If nothing interesting found, it will return to it's normal searching

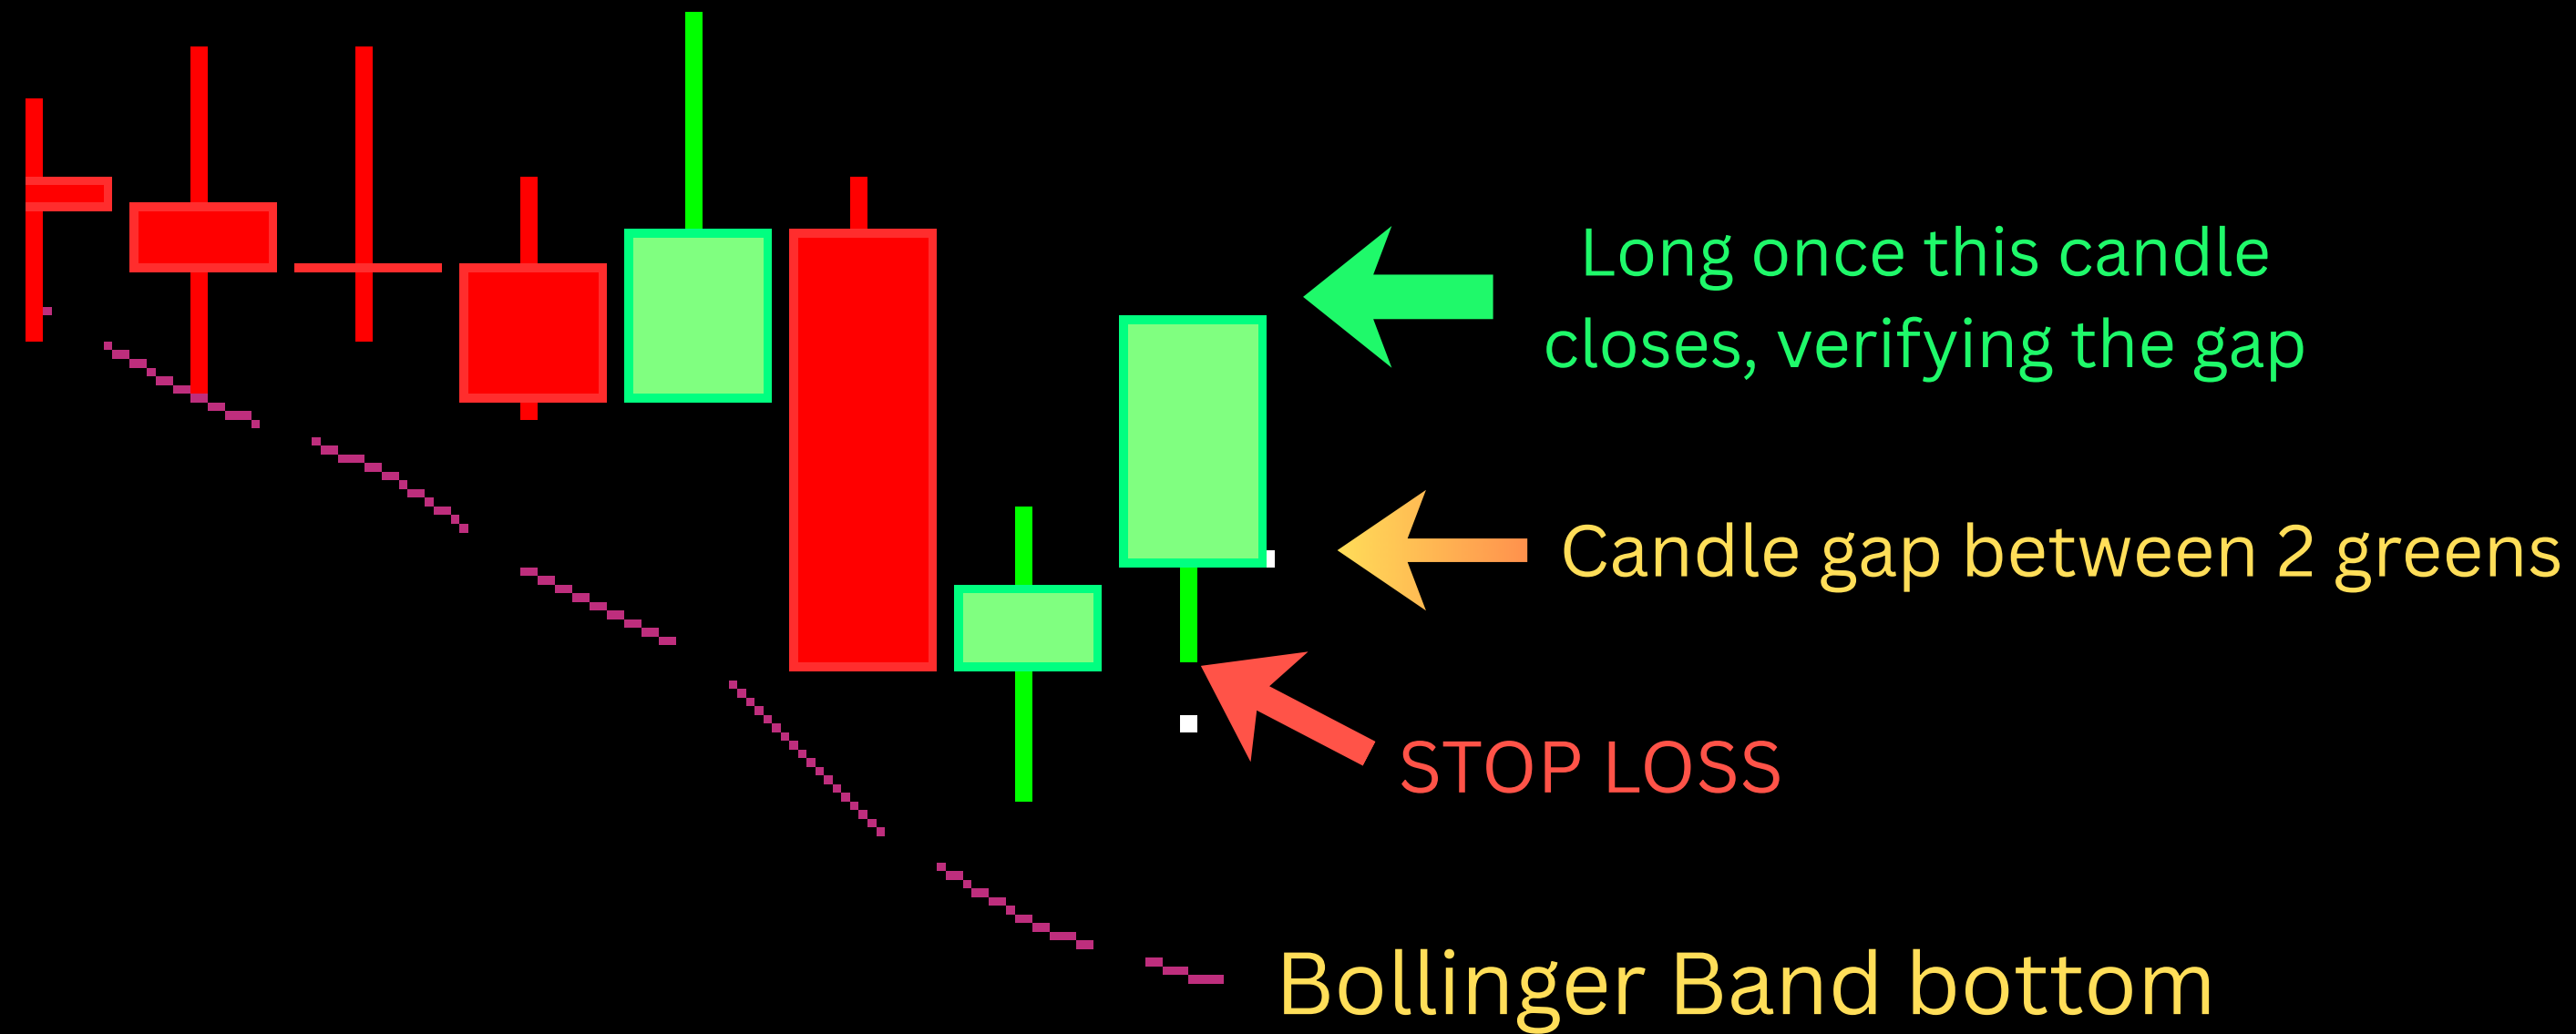

Strict Rules

- Set NQ to 1000 tick, or ES to 2000 tick
- Use NQ, not MNQ (you can setup cross trading)
- Only trade 10:15am to 3pm EST
- Candle gaps must be at least 3 candles long (before getting filled). The longer the gap line has existed, the more intense the reversal

Bollinger Gap

Requirements:

- Price must form 2 green candles, with a gap in between
- Price must be touching (or VERY NEAR) bottom of 20/2 standard bollinger band
- Stop loss is bottom of the gap candle (top one)

Bollinger Gap

Common Questions:

- **Why is the stoploss so small?** - The premise is a launch upward (price is in a hurry), so any yankback and your premise is no longer valid, thus kill that trade
- **How close to the bollinger?** - The closer the better, ideally candles are touching or below the BB
- **Should I trade a doji candle?** - Fuck no, your premise is “in a hurry”. A doji shows confusion in the market

Stupid Shit to Avoid:

- Trading when it's nowhere near the lower band
- Trading a **huge** candle, thus bankrupting yourself if that trade doesn't workout
- Not holding trade long enough - it's in a hurry, just let it ride
- Not waiting for the candle to close, then it's a red candle and you lost cash

Short once candle closes,
verifying gap

Band to Band Profits

- Your take profit for Trade 1 at the opposite bollinger band
- Any trades in the opposite direction, ignore. You're soaking until it reaches the other band, or your stop

Take profit at
opposite band touch

Fill and Reverse

Requirements:

- A candle gap formed before, and my indicator extends a line from it. The line extends forever, until market comes back to examine that price
- Market returns to that area later, touches it, then reverses back to what it was doing. Basically, a quick coffee break to see what's there

A while back, price left a candle gap here. My indicator extends a line from it

We “fill the gap”, then reverse

Fill and Reverse Helpers

Important: Moving to a break even stop is suicidal on this particular trade. Ensure you have a tiny stop, and leave it.

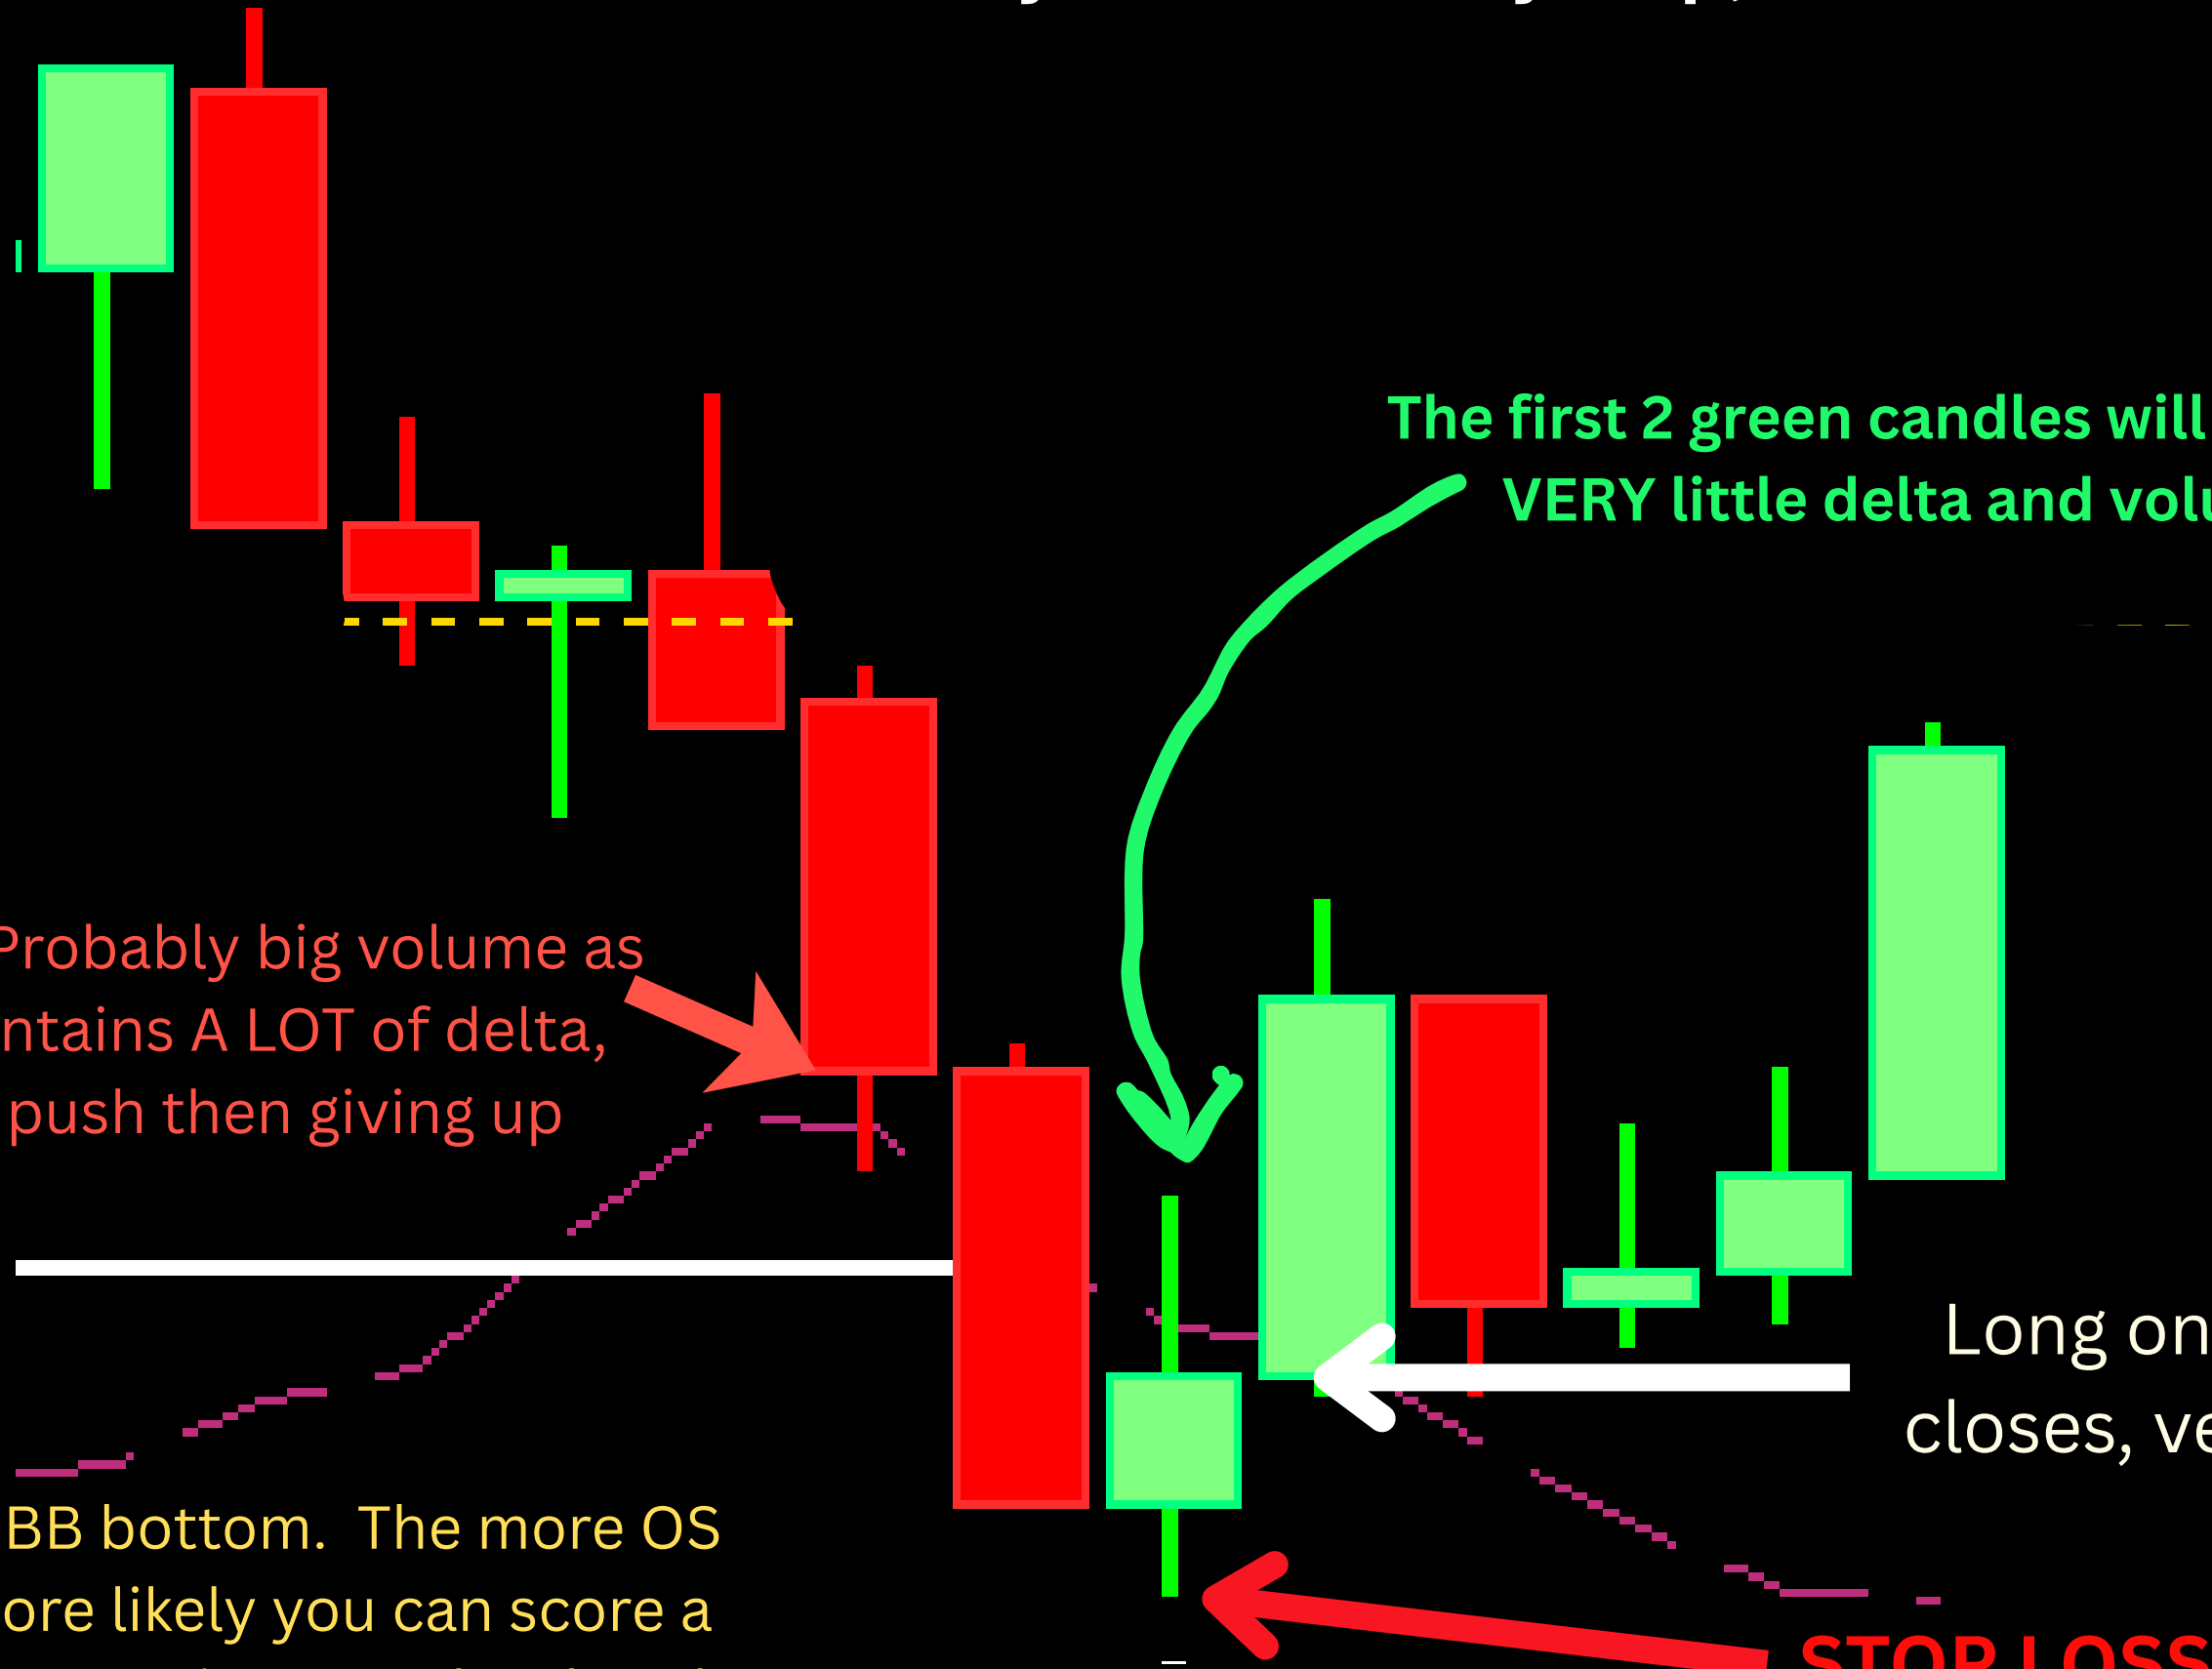

The first 2 green candles will contain
VERY little delta and volume

Big Red candles. Probably big volume as well. This will contain A LOT of delta, showing a final push then giving up

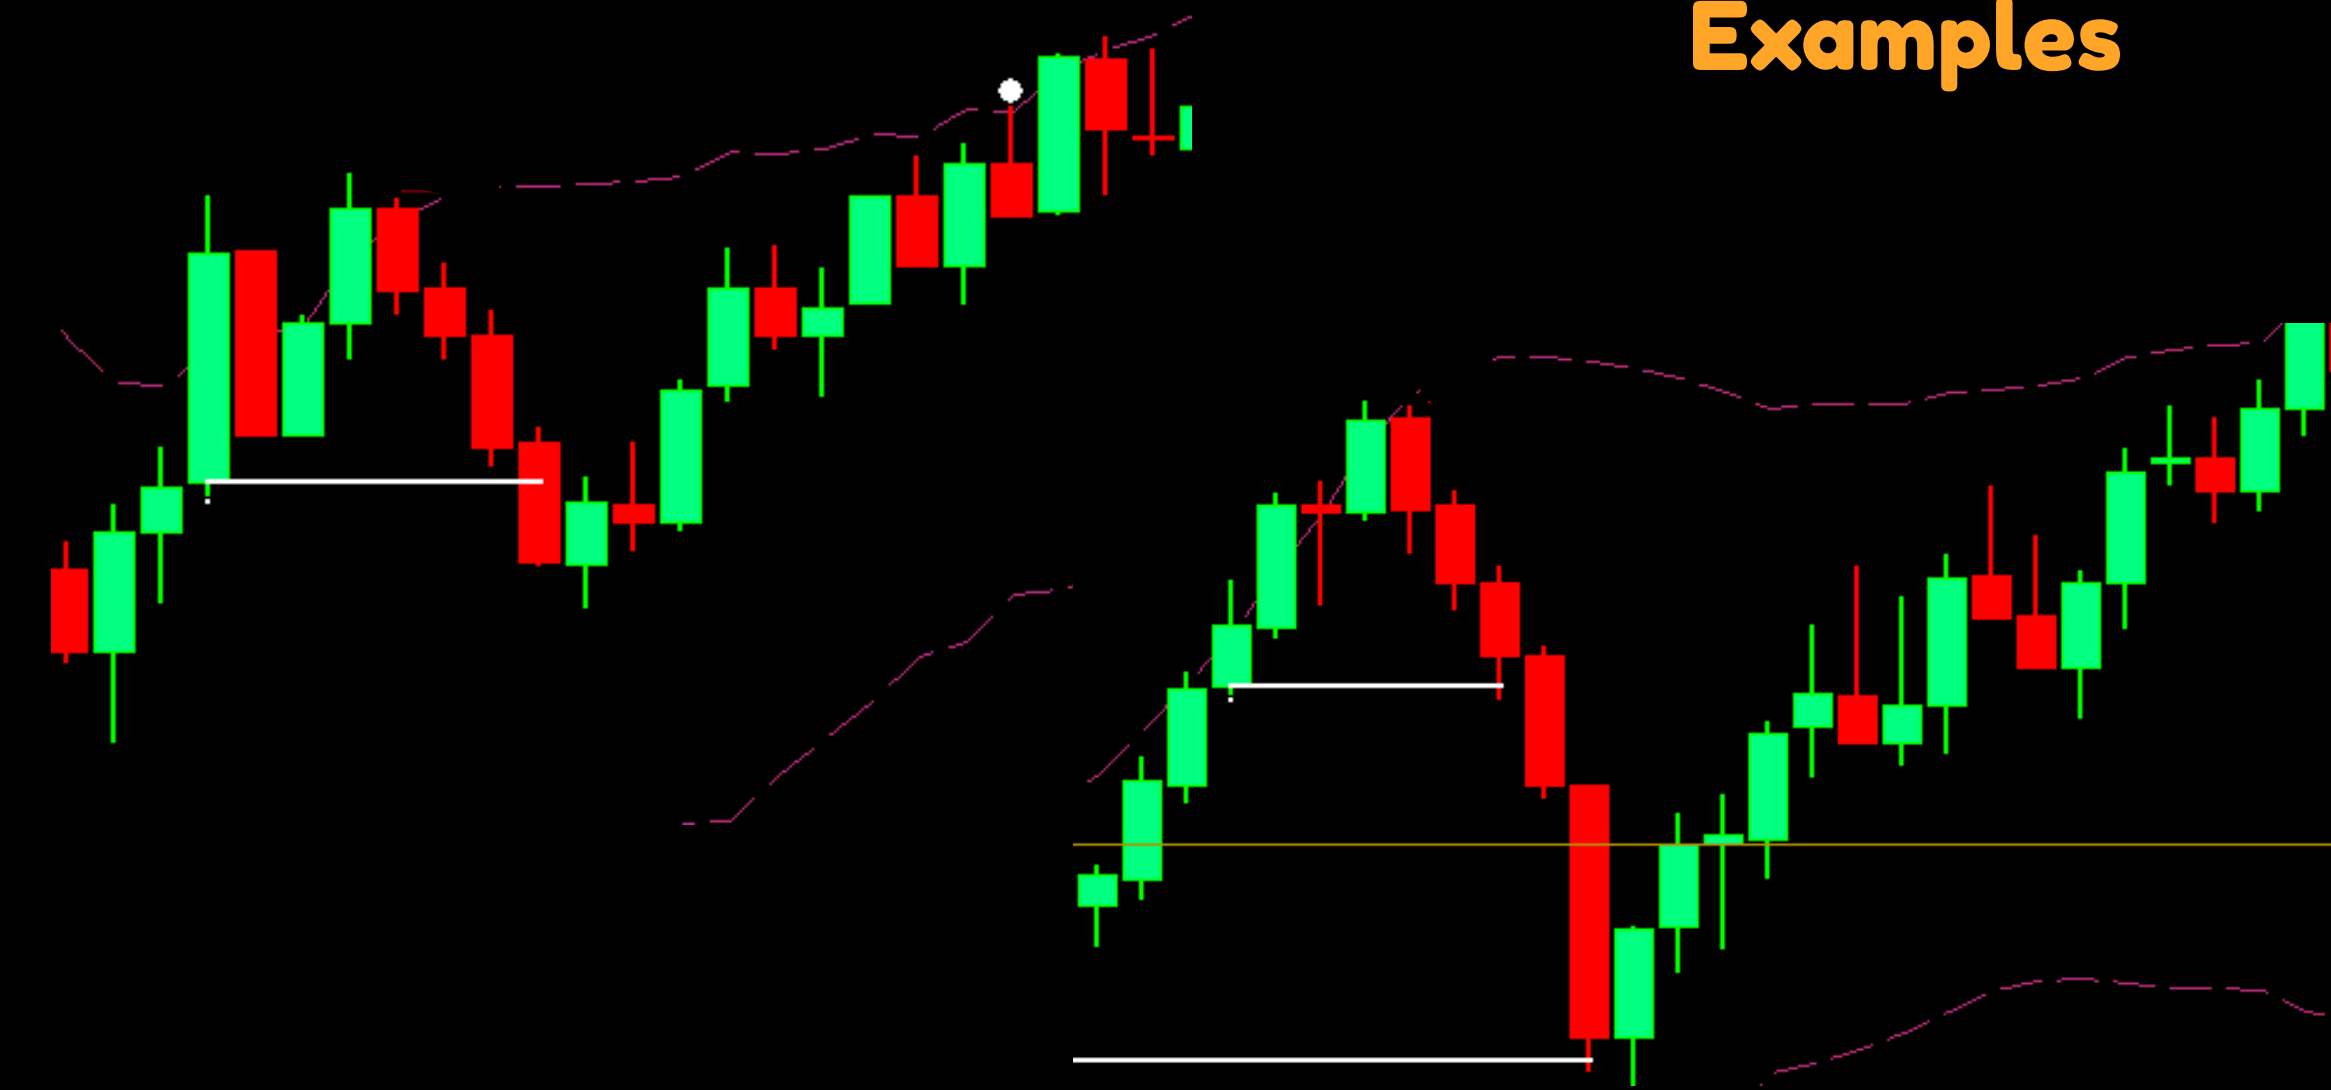

Long once this candle closes, verifying the gap

Reverses beyond BB bottom. The more OS your RSI is, the more likely you can score a reversal here. Not a requirement, but handy

STOP LOSS

Fill and Reverse Examples

If the reversal green candle is bigger than previous red, HUGE help!

NQ stop loss hunts

Now the obvious question: Can we wait for that predictable stoploss snapback, and then only trade those?

This only occurs 3 to 4 times a day, so it's too rare for me personally. But I'll always re-enter after being stopped

Fill and Continue

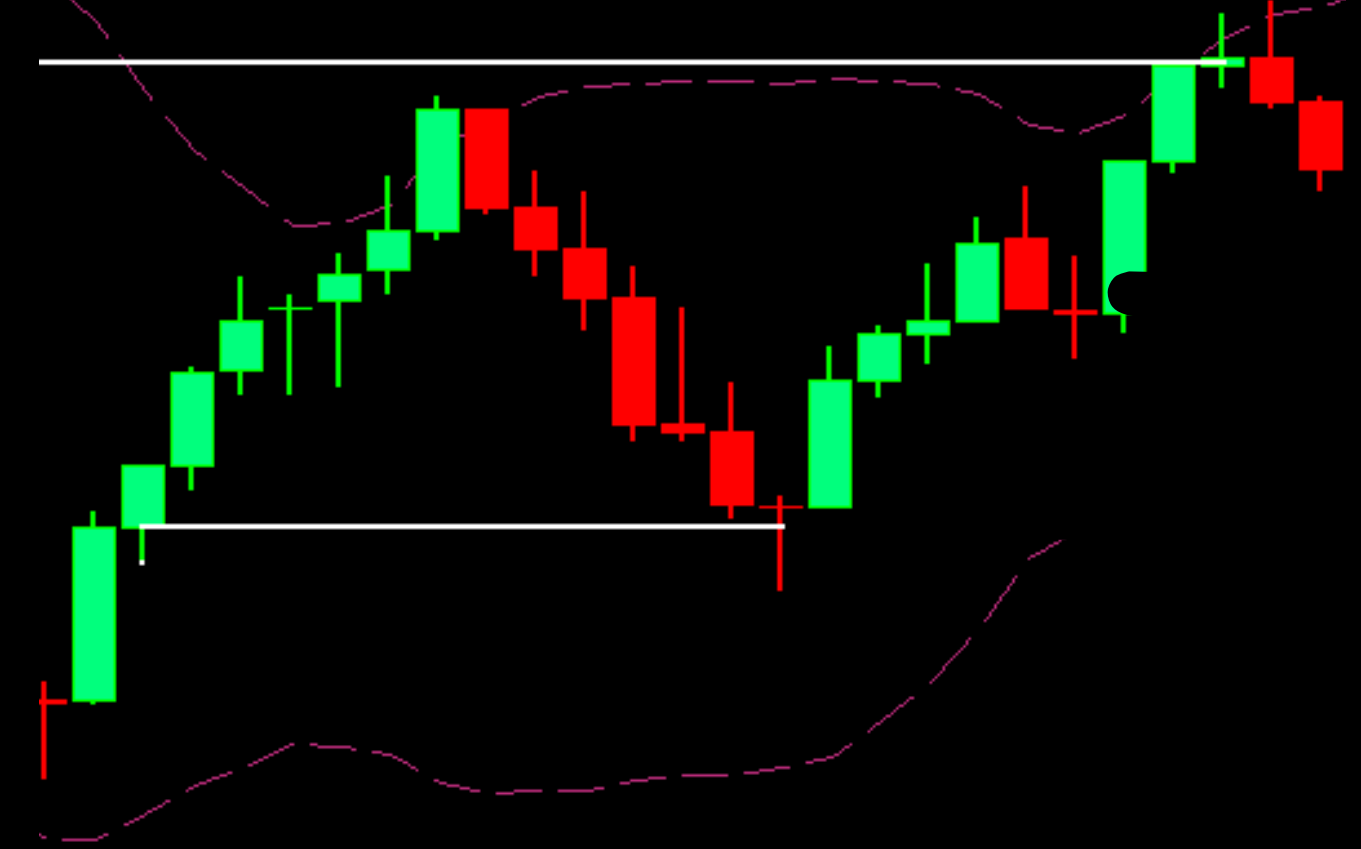

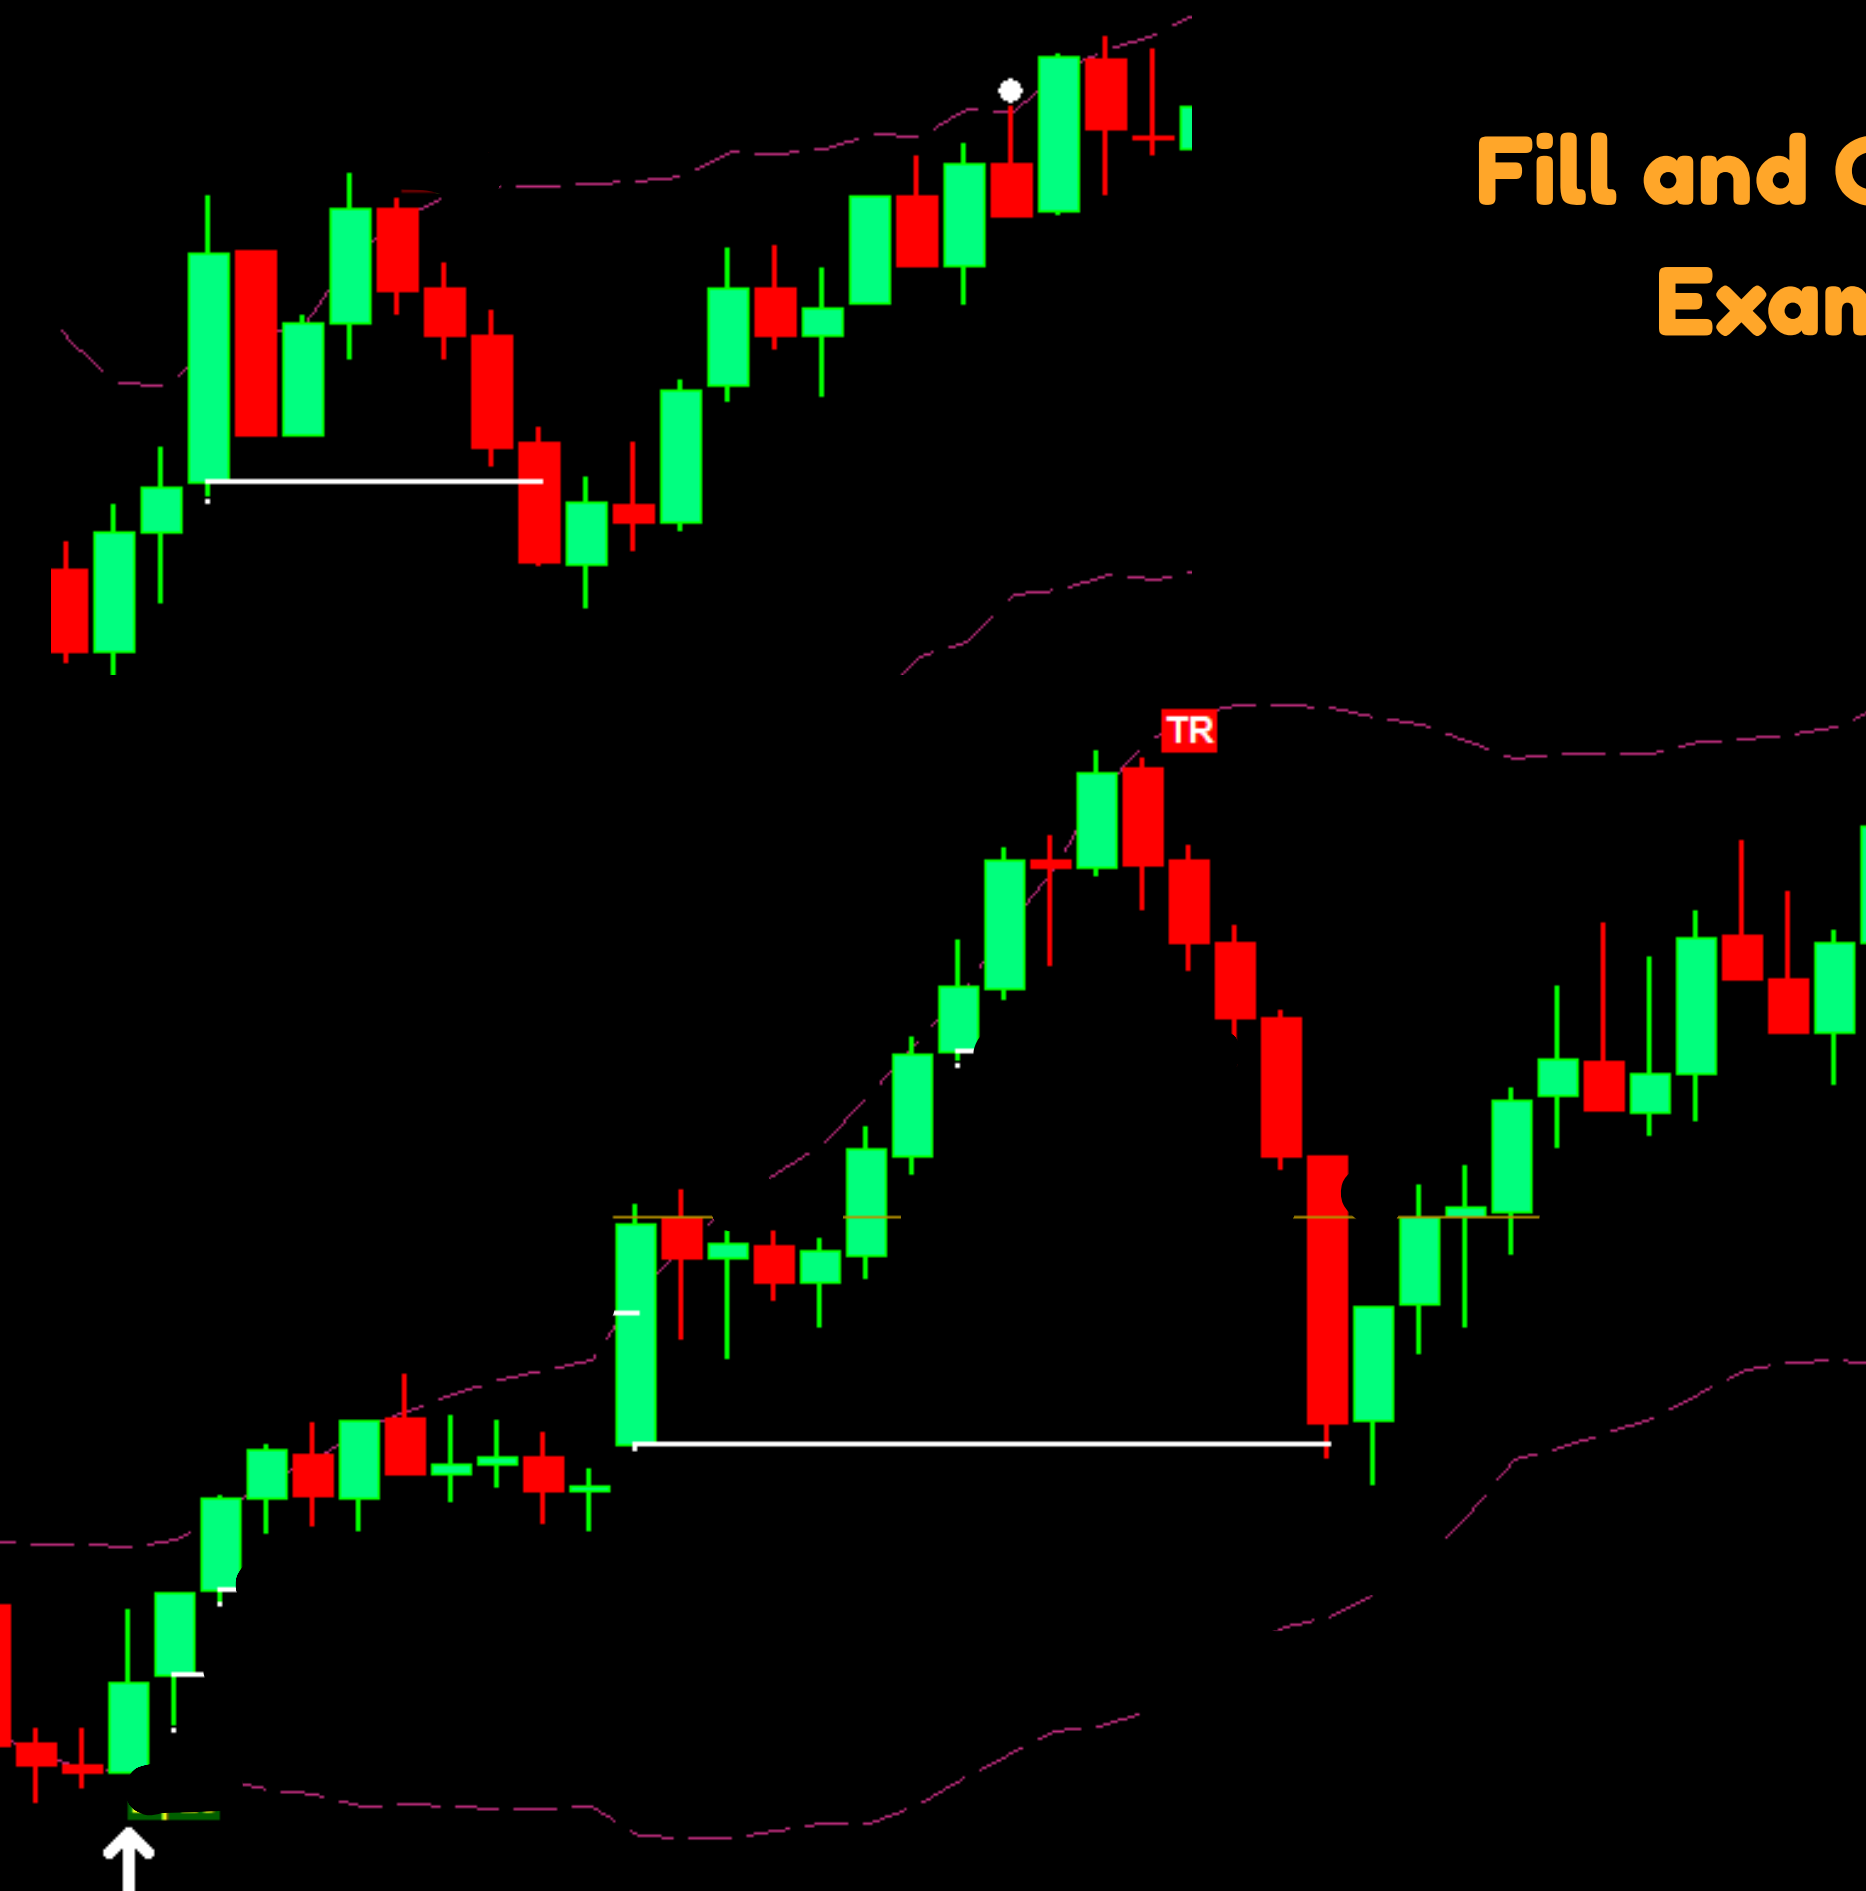

Don't sleep on this trade,
my results are 84%
successes when I use it

Requirements:

- Same as Trade 2, but only in a trend continuation. Trend is upward, we pullback a little to fill a previous gap, then continue
- **Never go break-even, ensure tiny stop and leave it**

Fill and Continue Examples

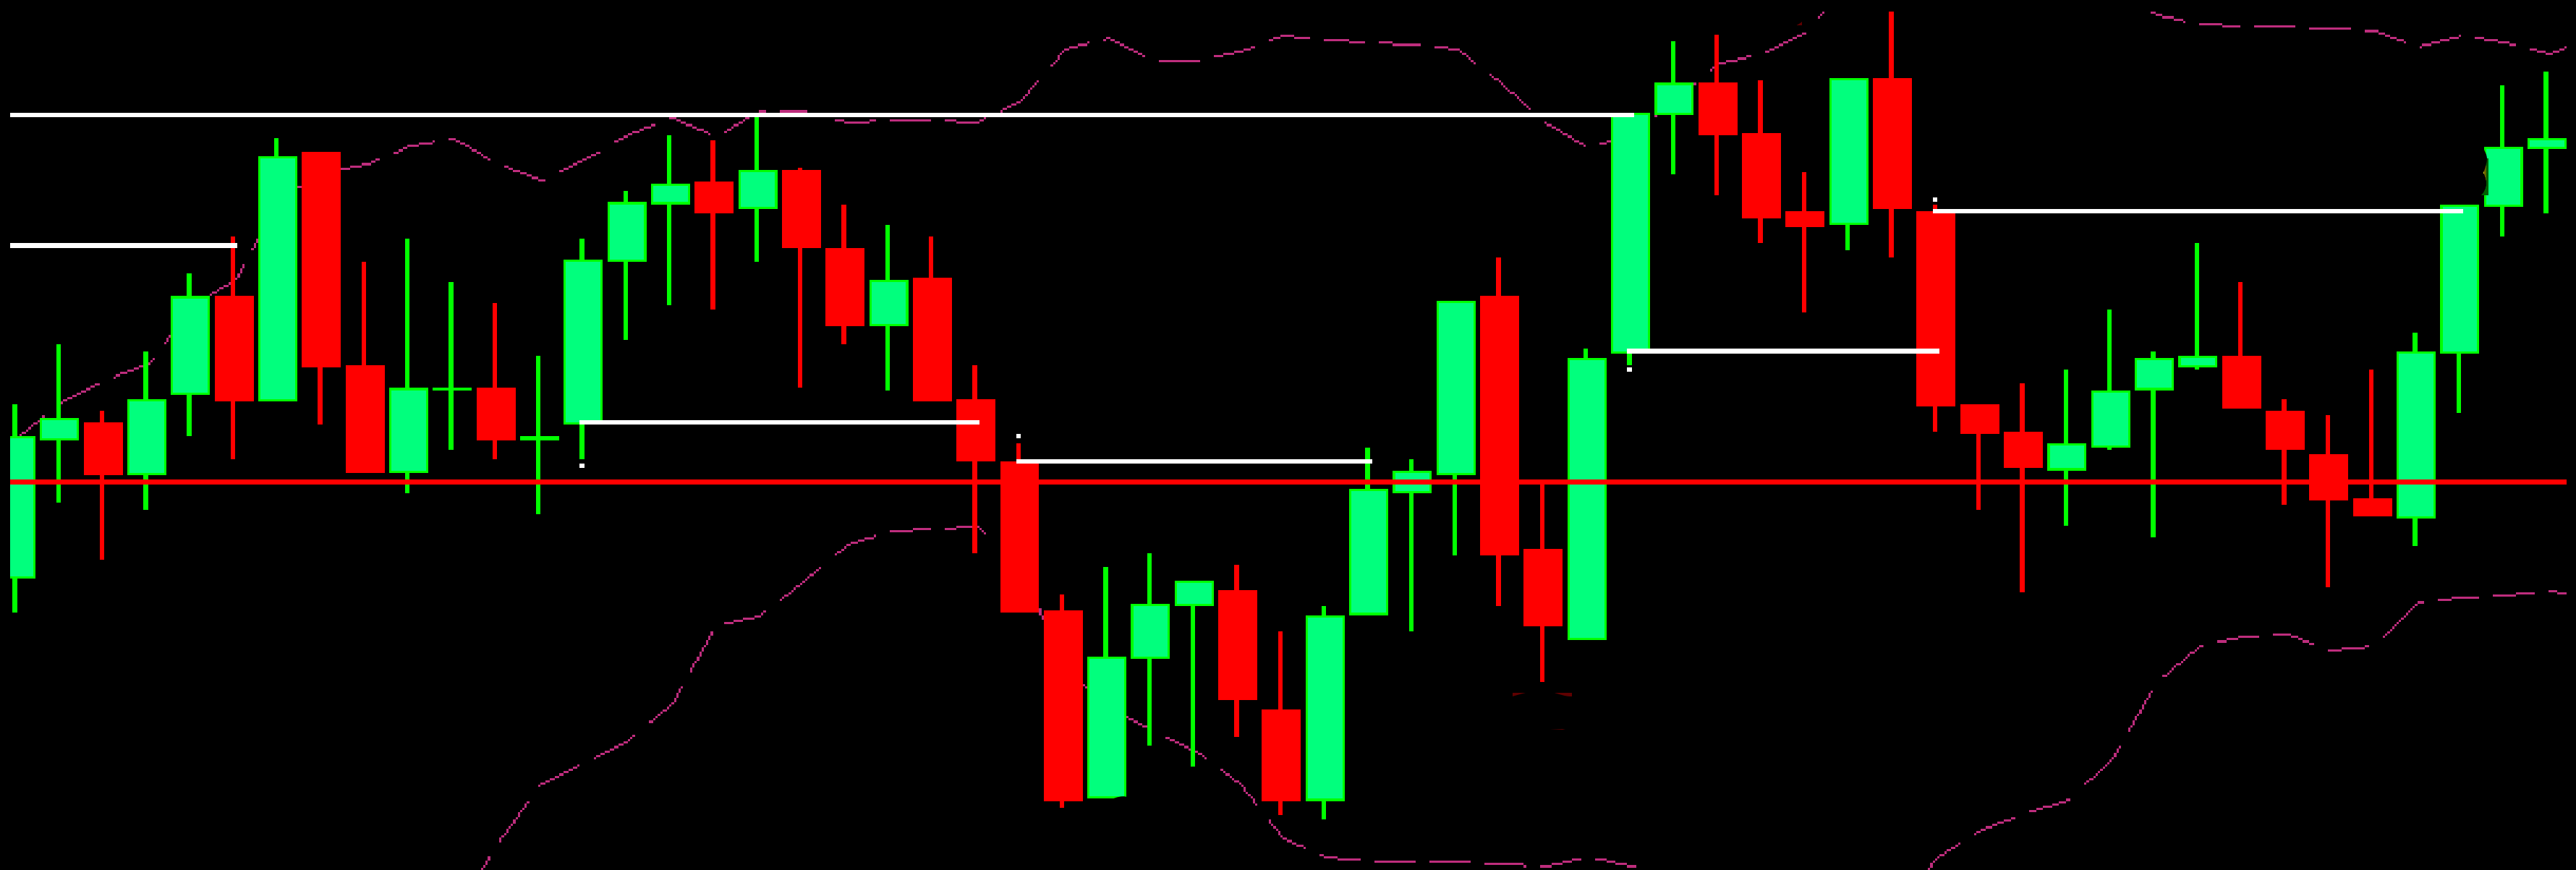

Not every white line is a trade. If they don't follow these rules, don't trade

Spiderwebs

Once a spiderweb starts forming (shitload of lines everywhere),
use EXTREME CAUTION. You'll get some false signals. You're
better off waiting for a clean, easy to read signal

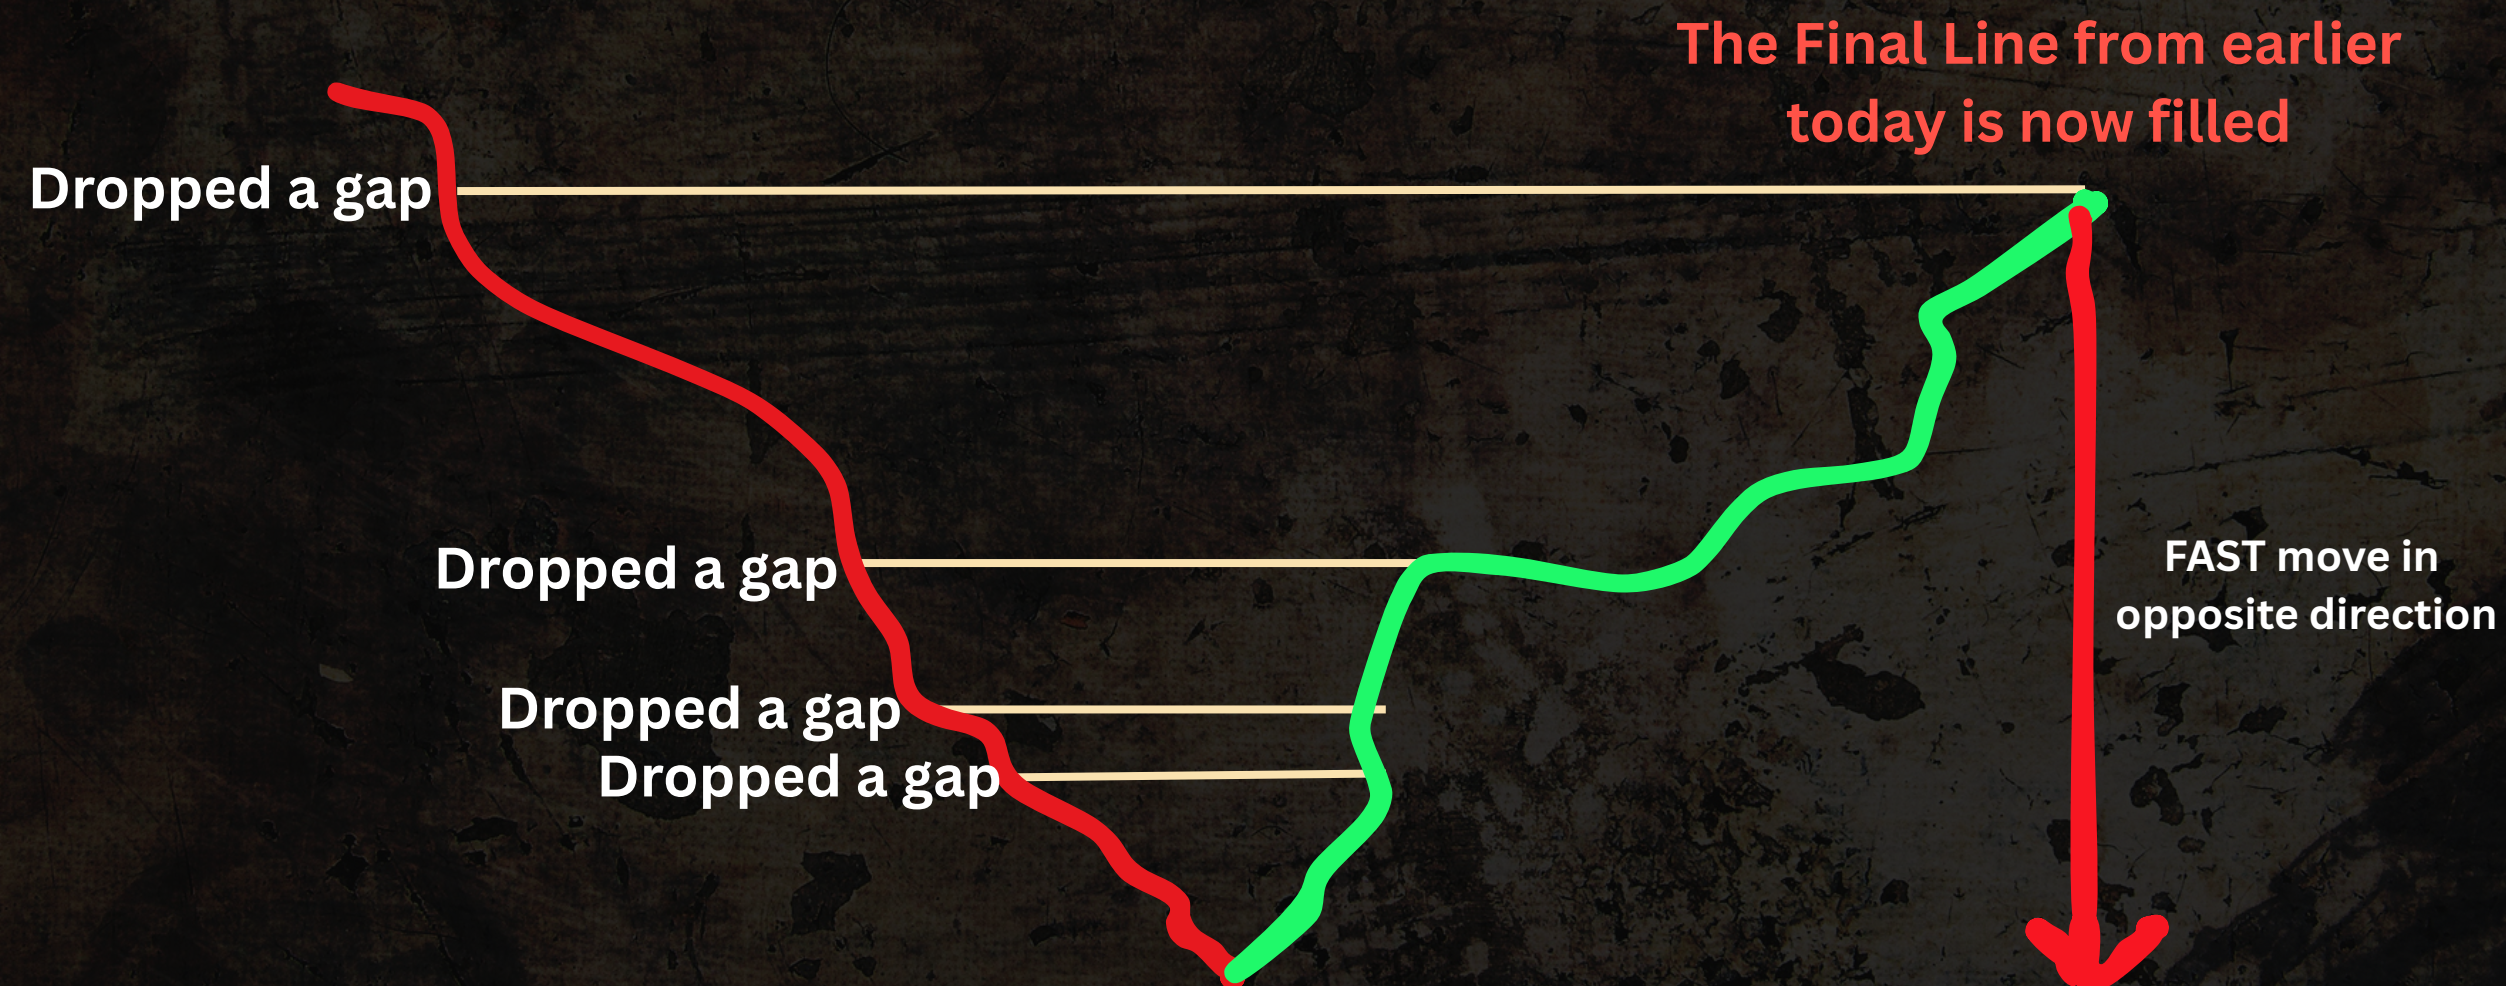

★ Advanced

The Final Line

The “final line” refers to a series of candle gaps, all being filled in a row. We slowly grind up towards that obvious, alone line from earlier in the day. Once filled, you’ll usually see an insane RUSH to the opposite direction, since price has no reason to stay in the area. These gems are easy, quick, predictable moves.

✦ Treasure Map

“Missed Trade” Fix

“Since candle gaps are so easy to predict, you can schedule ahead of time when a “big reverse” like the Final Line offers. Grab your food, water, take a piss and then wait to see a possible reaction to the level.
